WEATHER OF CONCERN

Weather of Concern

- The National Weather Service advises that as high pressure builds into California it will produce northeast winds of 15 to 25 mph with gusts to 40 mph that will surface across the mountains and below the canyons and passes of Southern California tonight, 01/12/18, through tomorrow, 01/13/18, morning.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A strong high pressure ridge will build over the West Coast today and remain in place through Sunday. Dry N-NE surface winds will develop from the western Cascade-Sierra slopes to the Sacramento Valley and surrounding foothills and through the Bay Area today through late Saturday, and shift to NE-SE Saturday night and Sunday. Peak gusts in wind-prone areas will be 20-30 mph. Other valley locations, drainages, and low spots without the N-NE winds will have strong inversions form with fog. In areas without inversions afternoons will be mostly sunny and dry with temperatures 5-15 degrees above normal, depending on the presence of wind.

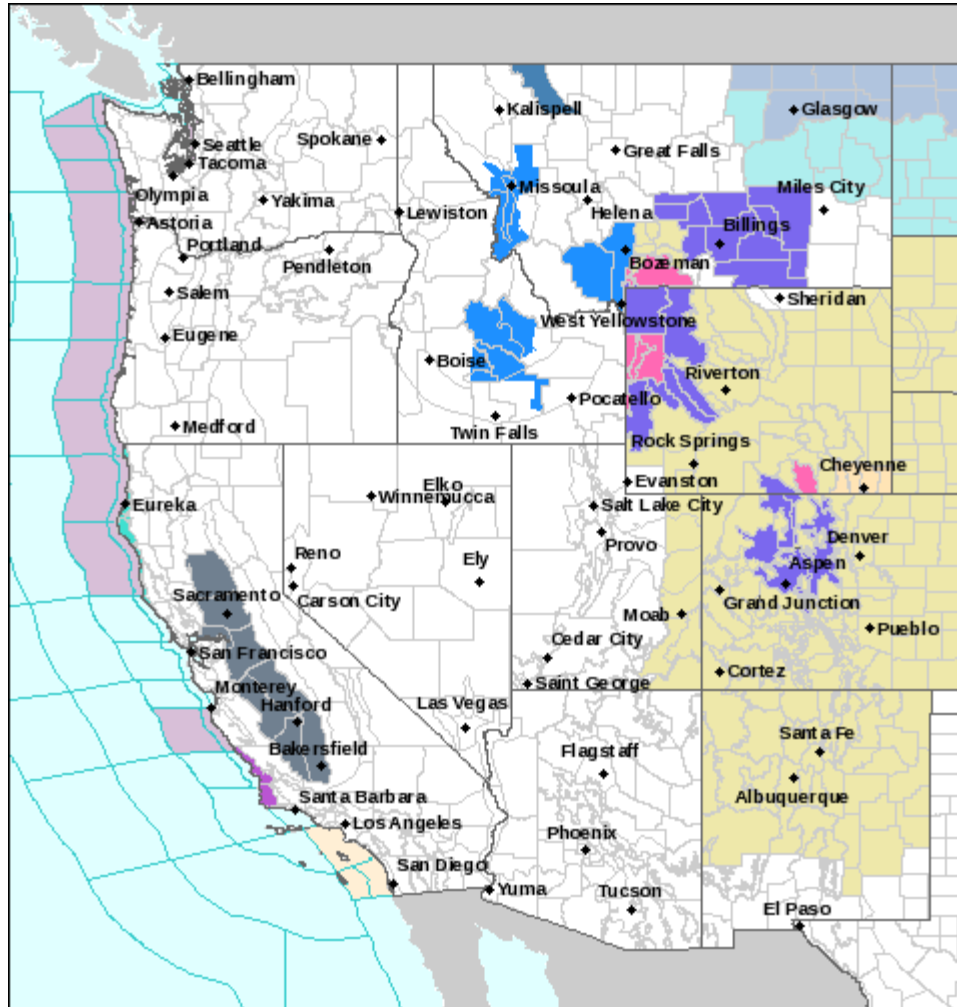

The ridge will break down and move east on Monday, allowing a new series of Pacific storm systems to move across the region. The first system will move onshore during the day on Monday and spread across the region overnight, exiting by midday Tuesday. Snow levels with this system will start out above 6000 ft, then fall to 4000 ft in the north and 5500 ft in the south Monday night. The next system will move onshore Wednesday night and exit the region late Friday. Snow levels will drop to 2000 ft in the north and 4000 ft in the south late Thursday. Also, as each system approaches (Monday and Wednesday) S-SW winds will gust to 30-40 mph in wind-prone areas.

SOUTHERN CALIFORNIA

Temperatures will warm and humidity will lower across the area through Saturday as high pressure over California strengthens. Maximum temperatures will be in the mid 50s to mid 60s across the mountains, 60s in the Central California valleys, and 70s in the regions valleys today. Temperatures will warm another 3 to 5 degrees across the coastal and valley areas Saturday. Minimum humidity will be mainly between 15% and 30% away from the Central Valley and coast today and then drop into the single digits and teens Saturday. Northeast winds of 15 to 25 mph with gusts to 40 mph will surface across the mountains and below the canyons and passes of the region tonight through Saturday morning. A slow cooling trend and a slow increase in humidity will occur Sunday through the middle of next week as the ridge of high pressure weakens and zonal flow takes place. A Pacific trough will bring below normal temperatures and possible showers to the region late next week. At this time, it looks as though rainfall accumulations will be on the light side.
